## Waste is Polluting our Air

Estimates are that 10% of Delhi's air pollution can be reduced if solid waste was better handled. A key part of it is diverting wet waste away from landfills, so it doesn't emit methane and burn. If we do want to stop solid waste from adding to our air pollution loads, then we should design plans where waste is handled locally—both composting and recycling. Otherwise, transportation of waste to far-away locations will continue to stress the environment. Wondering what you can do? Start by composting at home, or in your colony. Chintan can help you if you live in the NCR region, and link you with others who can help you if you live in other regions.
